Professional Summary

Computing Science graduate and Data Engineer with experience developing data applications, analytics automation, and responsible GenAI workflows in a public-sector environment. Experienced with Python, Databricks, CI/CD, data pipelines, and containerised systems, with an interest in building reliable technology and data platforms for financial services.

Work Experience

GovTech | Singapore Jun 2026 – Present
Data Engineer, Internal Audit

- Develop Databricks applications and technical proof-of-concepts that automate audit workflows and improve transparency of audit information for business users.
- Built an audit milestone tracking solution using Medallion Architecture to structure data flows across processing layers, with Databricks Asset Bundles integrated with GitLab for version-controlled development and deployment.
- Developing a Vite application that enables users to upload files to Databricks Volumes, trigger processing jobs, and access analytics dashboards; deployed on Northflank.

GovTech | Singapore Sep 2025 – Apr 2026
Data Scientist Intern, Internal Audit

- Built and maintained an end-to-end analytics pipeline to automate audit evidence processing and improve consistency for internal stakeholders.
- Developed **docXtract**, a modular Python tool that reduces manual extraction of embedded audit evidence from Microsoft Office and Outlook files.
- Implemented iterative nested-file extraction, provenance tracking, and binary/content-aware deduplication, improving traceability and consistency of extracted evidence.
- Added support for OOXML, legacy OLE, and MSG files with file-type identification and password-protection detection across nested documents.

Selected Projects

Distributed Needy Fund Application System (DNFAS) ML & LLM Service
NVIDIA NIM | Llama 3.1 8B Instruct | gRPC | Docker | Kubernetes

- Developed an experimental ML/LLM microservice for automated financial-aid application summarisation and 1–5 priority scoring using financial and employment indicators.
- Integrated NVIDIA NIM and Llama 3.1 8B Instruct into a containerised gRPC architecture deployed with Docker and Kubernetes.
- Evaluated limitations in LLM responses and classification behaviour, identifying prompt refinement as necessary for more reliable decision-support outputs.

Education

Singapore Institute of Technology | University of Glasgow Aug 2023 – Apr 2026
BSc. Computing Science GPA: 4.64 / 5.0

Relevant Modules: Machine Learning, Data Analytics, Cloud Computing

Ngee Ann Polytechnic Apr 2018 – Apr 2021
Diploma in Financial Informatics / Specialisation in Financial Analytics GPA: 3.48 / 4.0

Awards / Achievements

- HackRift Champion** [GovTech x NCS x SIT] (Dec 2024) – ScamSlayer POC
- Dell Tanzu Champion** (Apr 2025) – Grub microservices project
- Provost List AY2024/25**

Technical Skills

- Languages & Data:** Python, Java, C, SQL, R, Databricks, TensorFlow, Machine Learning, LLM Integration
- Data Engineering & DevOps:** Medallion Architecture, Databricks Asset Bundles, GitLab CI/CD, Git
- Cloud & Distributed Systems:** Docker, Kubernetes, gRPC, Vite, Northflank
